Coimbatore, Tamil Nadu 641062

Technical Skills

Languages: Java, Python, C

Web Technologies: HTML, CSS, JavaScript

Frameworks: Spring Boot

Tools: Git, GitHub, Firebase, Google Cloud

Core Concepts: Object-Oriented Programming, Networking, Cryptography, DBMS, OS

Languages

English (Fluent), Tamil (Fluent), Telugu (Basic)

Experience

Elysium Technologies - *Cybersecurity Intern (15 days)*

- Gained exposure to vulnerability assessment workflows and security tools
- Analysed basic security practices in real-world environments
- Explored industry-level cybersecurity methodologies

Education

Expected in 2028

Bachelor of Computer Science & Engineering (Cyber Security) (B.E)

Dr.N.G.P. Institute of Technology

Tamil Nadu, India
CGPA: 8.25

Completed in 2024

High School Diploma:
GRD Matric Higher Secondary School
Coimbatore
Percentage: 74%

Summary

Computer Science student specializing in cybersecurity and backend development, with hands-on experience building security-focused tools including a USB forensic analysis system and password vulnerability analyser. Strong in data structures, system design, and applying AI for security and automation.

Achievements

- Finalist – IEEE Project Expo 2025 ("HoloLearn")
- Top 20 – InCTF Cyber Konclave (CTF Competition)
- Solved 150+ DSA problems on GeeksforGeeks
- Presented startup idea at TN Global Startup Summit (TNGSS 2025)

Certifications

- Gold Medal (94%) – NPTEL: Human Computer Interaction
- Cisco Networking Basics Certification

Projects

HoloLearn - Holographic-Based Remote Teaching System (Flask, OBS, Streaming Tech)

- Developed a real-time immersive learning platform using Flask, OBS, and multi-camera streaming
- Engineered a low-cost scalable solution to improve rural education accessibility

Enhanced Password Analyzer (Python, zxcvbn, John the Ripper)

- Developed a password security analyzer leveraging zxcvbn and attack simulations (John the Ripper) to identify real-world vulnerabilities
- Identified weak password patterns and improved security recommendations

USB Forensic Analysis tool with URB request block (C/Python, USB Protocols)

- Designed and implemented a USB monitoring system to detect and block malicious device interactions before kernel-level access
- Implemented URB-based request filtering for real-time threat prevention
- Logged USB communication patterns for forensic analysis and anomaly detection

[\[GitHub\]](#)

Election Navigator AI (Python, Gemini API, Firebase, Google Cloud)

- Developed an AI-powered chatbot using Google Gemini API for natural language understanding and real-time response generation
- Integrated Firebase and deployed on Google Cloud for structured real-time responses [\[Live Demo\]](#)

Extracurricular Activities

- Assisted in organizing technical and non-technical events as part of the ISEA Club, improving teamwork and coordination
- Explored full-stack development using Java Spring Boot, building backend and web-based applications
- Actively participated in coding practice and technical skill development beyond coursework
